

An Electronic Hook Switch (EHS) cable allows the Cordless Headset to engage the phone without having to remove the handset from the cradle.

EHS Cables (*sold separately*) provide remote desk phone call control (answer/end) with the Plantronics Wireless Headset System.

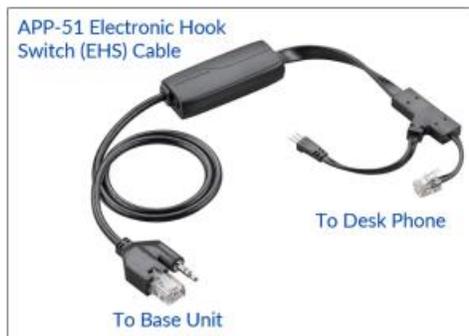

Follow the instructions below to connect your headset base unit to a desk phone using the EHS cable.

1. Connect the end of the EHS cable to the back of the headset base unit.

Poly VVX IP Phones require the [APP-51 EHS](#).

Yealink IP Phones require the [EHS40](#).

For all other phones, [click here](#) to check your phone for compatibility.

2. Connect the other end of the EHS cable to the desk phone as described in the *EHS Adapter Getting Started* guide that came with the cable.

The desk phone and handset will continue to function like normal.

3. Press the **Call Control** button on the headset to hear a dial tone.

4. Dial a test call from the desk phone. If needed, fine-tune the volume with the headset volume controls. The speaking and listening volumes can be adjusted on the desk phone.

**NOTE:** The minimum recommended separation distance between the desk phone and the headset base unit is 6 inches. Incorrect positioning may cause noise and interference problems that lead to poor audio quality.
