GT-400

v7

HAND SCANNER

The GT-400 is a timekeeping solution that offers real-time biometric authentication. By scanning a hand through this device, your employees will be able to clock in and out, check hours, and receive messages from managers.

Using the hand's geometry, the biometric hand scanner confirms the employee's identity without the need for a fingerprint. All GT-400 clocks are available with an optional battery backup and the anti-microbial surface reduces the transfer of bacteria.

SPECIFICATIONS

- Size:** 8.0 in. (20.32 cm.) wide, 11.18 in. (28.40 cm.) high, 7.52 in. (19.10 cm.) deep
- Weight:** 5.8 lbs
- Environment:** Operating 32 to 113F (0 to 70C)
- Relative Humidity:** 5% to 95% NC
- Non-operating (storage):** 14 to 140F-(40 to 85C)
- Communications:** Standard Ethernet 10/100 RJ-45 type
- Door Controls:** Optional 1 relay available
- Readers:** Optional Integrated Barcode Reader
- Battery Backup:** Optional 1.5 hour battery backup

ADDITIONAL FEATURES

The device includes an expanded frame, antimicrobial-infused platen, custom keypad and function keys, a 3.8 inch QVGA display for clearly defined employee prompts and messages, and a sealed optical reader path for the toughest and dirtiest clock environments. All GT-400s are ethernet compatible for a seamless integration into your existing network.
