

## Smart Home Technology via IP

In 2011, MOBOTIX expanded the product range with a hemispheric IP Video Door Station including IP-RFID reader and SIP telephony. In 2013, the functionality was enhanced by a flat wall mount display with RFID writer. So talking with a person in front of a door or switching the light remotely from anywhere in the world via a smartphone became reality. With the encrypted two-wire bus MxBus, IO-functions for smart homes and alarm

systems can be easily extended to the cameras or the IP door station. MOBOTIX offers IO-, GPS-, temperature- and other accessories as well as radar-based proximity sensors via MxBus.

IP-based Door Station • Keyless Access • Encrypted & Secure
